## Introduction

This document introduces and describes the Sustainable Finance Disclosure Regulation (SFDR) Data Framework that has been implemented in Dataland for capturing companies' environmental, social & governance metrics at both entity- and product-level. The Framework is derived from the corresponding [\*Regulation on sustainability-related disclosures in the Financial Services Sector\*](#).

The Regulation was published on December 9<sup>th</sup>, 2020, and entered into force on March 10<sup>th</sup>, 2021. By setting out how financial market participants have to disclose sustainability information, it helps those investors who seek to put their money into companies and projects supporting sustainability objectives to make informed choices. The SFDR is also designed to allow investors to properly assess how sustainability risks are integrated in the investment decision process. In this way, the SFDR contributes to one of the EU's big political objectives: attracting private funding to help Europe make the shift to a net-zero economy.<sup>1</sup> The Regulation is an important pillar of the European Commission's Action Plan for Financing Sustainable Growth<sup>2</sup>, and goes hand in hand with the implementation of the EU Taxonomy. Whereas the EU Taxonomy Regulation supports companies to capture their environmentally sustainable economic activities, the SFDR determines how to track and disclose these activities. Dataland also offers a [EU Taxonomy Data Framework](#), thus providing company information related to sustainability in a central spot.

By documenting the SFDR Data Framework in Dataland, companies can showcase their sustainable adherence to the requirements of the regulation in an efficient and transparent manner, evidencing their trustworthy and sovereign approach to support the [European Green Deal](#). The Framework is visible to all the stakeholders such as customers, suppliers or other interested parties and can be updated at any time.

Note: the Principal Adverse Impact (PAI) Disclosures under the Regulation on sustainability-related disclosures in the financial services sector are currently being reviewed, this might lead to changes to
